4-20 mA & Serial Data Output Transmitter for Average Time of Periodic Events

Features

• 4-20 mA, 0-20 mA, 0-10V or -10V to +10V transmitter output, 16 bits, isolated
• RS232 or RS485 serial data output, Modbus or Laurel ASCII protocol, isolated
• Dual 120 mA solid state relays for alarm or control, isolated
• Transmits average time of periodic events with width from 1 µs to 199.999 s
• Resolution to 0.2 µs, rep rated to 250 kHz
• Inputs from NPN or PNP proximity switches, contact closures, digital logic, or magnetic pickups down to 12 mV.
• Analog output resolution 0.0015% of span (16 bits), accuracy ±0.02% of span
• 5V, 10V or 24V dc transducer excitation output, isolated
• Universal 85-264 Vac / 90-300 Vdc or 10-48 Vdc / 12-32 Vac power

Description

The Laureate time interval transmitter can transmit pulse width or time delay between individual pulses to a resolution of 0.2 µs for periodic events. It can also transmit average pulse width or average time delay between multiple pulses.

Time interval is measured between inputs on channels A and B. Timing starts when a pulse is applied to Channel A (selectable positive or negative edge), and ends when a pulse is applied to Channel B (selectable positive or negative edge). In case of a single pulsed signal, the A and B inputs can be tied together. A positive or negative slope may be selected to start timing, and the opposite slope must be selected to stop timing. Timing is achieved by counting 5.5 MHz clock pulses. Multiple integral time intervals are averaged over a gate time which is selectable from 10 ms to 199.99 s and also controls the maximum output rate.

The dual-channel signal conditioner used for pulse detection accepts inputs from proximity switches with PNP or NPN output, TTL or CMOS logic, magnetic pickups, contact closures, and other signals from 12 mV to 250 Vac. Jumper selections provide optimum operation for different sensor types and noise conditions. A built-in 5V, 10V or 24V dc excitation supply can power proximity switches and other sensors, and eliminate the need for an external power supply.

Standard features of Laureate transmitters include:

• 4-20 mA, 0-10V or -10V to +10V analog transmitter output, isolated, jumper-selectable and user scalable. All selections provide 16-bit (0.0015%) resolution of output span and 0.02% output accuracy of a reading from -99,999 to +99,999 counts that is also transmitted digitally. Output isolation from signal and power grounds eliminates potential ground loops.
• Serial communications output, isolated. User selectable RS232 or RS485, half or full duplex. Three protocols are user selectable: Modbus RTU, Modbus ASCII, or Laurel ASCII. Modbus operation is fully compliant with Modbus Over Serial Line Specification V1.0 (2002). The Laurel ASCII protocol allows up to 31 Laureate devices to be addressed on the same RS485 data line. It is simpler than the Modbus protocol and is recommended when all devices are Laureates.
• Dual solid state relays, isolated. Available for local alarm or control. Rated 120 mA at 130 Vac or 170 Vdc.
• Universal 85-264 Vac power. Low-voltage 10-48 Vdc or 12-32 Vac power is optional.

Easy Transmitter programming is via Laurel's Instrument Setup Software, which runs on a PC under MS Windows. This software can be downloaded from our website at no charge. The required transmitter-to-PC interface cable is available from Laurel (P/N CBL04).
## Specifications

### Pulse Input

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Signal Types</td>
<td>AC, pulses from NPN, PNP transistors, contact closures, magnetic pickups</td>
</tr>
<tr>
<td>Signal Ground</td>
<td>Common ground for channels A &amp; B.</td>
</tr>
<tr>
<td>Minimum Signal</td>
<td>Nine ranges from (-12 to +12 mV) to (+1.25 to +2.1V).</td>
</tr>
<tr>
<td>Maximum Signal</td>
<td>250 Vac</td>
</tr>
<tr>
<td>Maximum Frequency</td>
<td>1 MHz, 30 kHz, 250 Hz (selectable).</td>
</tr>
<tr>
<td>Contact Debounce</td>
<td>0, 3, 50 ms (selectable).</td>
</tr>
<tr>
<td>Time Base Accuracy</td>
<td>Quartz crystal calibrated to ±2 ppm.</td>
</tr>
<tr>
<td>Span Tempco</td>
<td>±1 ppm/°C (typ)</td>
</tr>
<tr>
<td>Long-term Drift</td>
<td>±5 ppm/year</td>
</tr>

</tr>
<tr>
<td>Digital Addressing</td>
<td>247 Modbus addresses. Up to 32 devices on an RS485 line with no repeater</td>
</tr>
</tbody>
</table>

### Transducer Excitation Output (standard)

| Jumper Selection 1        | 10V @ 60 mA, isolated to 50V from signal ground                                                |
| Jumper Selection 2        | 5V @ 50 mA, isolated to 50V from signal ground                                                 |
| Jumper Selection 3        | 15V @ 60 mA, non-isolated                                                                      |

### Power Input

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Standard Power</td>
<td>85-264 Vac or 90-300 Vdc</td>
</tr>
<tr>
<td>Low Power Option</td>
<td>10-48 Vdc or 12-32 Vac</td>
</tr>
<tr>
<td>Power Frequency</td>
<td>DC or 47-63 Hz</td>
</tr>
<tr>
<td>Power Isolation</td>
<td>250V rms working, 2.3 kV rms per 1 min test</td>
</tr>
<tr>
<td>Power Consumption</td>
<td>2W typical, 3W with max excitation output</td>
</tr>
</tbody>
</table>

### Mechanical
