**Rear case screws - please note**

The rear panel is held in place with finger-screws, which only need to be gently tightened. **Do not use tools to tighten or loosen the screws, as this could cause damage to the internal threads.**

---

**Caution:** Risk of electrical shock if this instrument is not properly installed.

**Caution:** Read the whole manual before you install this display.
**Warranty**

We warrant our products against defects in materials or workmanship for a period of one year from the date of purchase.

In the event of a defect during the warranty period, the unit should be returned, freight (and all duties and taxes) prepaid by the Buyer to Laurel or to the authorized distributor from whom the unit was purchased.

Laurel or the distributor, at their option, will repair or replace the defective unit. The unit will be returned to the Buyer with freight charges prepaid by the distributor.

**LIMITATION OF WARRANTY**

The foregoing warranty shall not apply to defects resulting from:

1. Improper or inadequate maintenance by the buyer.
2. Unauthorized modification or misuse.
3. Operation outside the environmental specification of the product.
4. Mishandling or abuse.

The warranty set forth above is exclusive and no other warranty, whether written or oral is expressed or implied. We specifically disclaim the implied warranties of merchantability and fitness for a particular purpose.

**EXCLUSIVE REMEDIES**

The remedies provided herein are the buyer’s sole and exclusive remedies.

In no event shall we be liable for direct, indirect, incidental or consequential damages (including loss of profits) whether based on contract, tort or any other legal theory.

Warnings

Please carefully read this manual and all warnings. Install the display ONLY when you are sure that you’ve covered all aspects.

⚠ Where the product is intended for “UL” installations, removal or addition of option boards is not permitted.

⚠ Check that the model number and supply voltage suit your application before you install the display.

⚠ Connect the display according to current IEE regulations, IEC61010 & NFPA:70 National Electric Code in USA.

⚠ Power supplies to this equipment must have anti-surge (T) fuses rated at 1A for 230V supply, 2A for 110V supply, 5A for 48VAC supply or 10A for 11-30VDC.

⚠ Don’t touch any circuitry after you have connected the display, because there may be lethal voltages on the circuit board.

⚠ Do not apply power to the display if its case is open.

⚠ Only adjust on-board switches or connections with the power turned off

⚠ Make sure all screw terminals are tight before you switch the meter on.

⚠ Only clean the display’s case and window with a soft damp cloth. Only lightly dampen with water. Do not use any other solvents.

---

Rear case screws - please note

The rear panel is held in place with finger-screws, which only need to be gently tightened. Do not use tools to tighten or loosen the screws, as this could cause damage to the internal threads.
Introduction

Please contact us if you need help, if you have a complaint, or if you have suggestions to help us improve our products or services.

If you contact us about a product you already have, please tell us the full model number and serial number, so that we can give you accurate and fast help.

This product has a 1-year warranty. We will put right or replace any display which is faulty because of bad workmanship or materials. This warranty does not cover damage caused by misuse or accident.

If you return a unit for repair, please include a detailed description of the problem, and the name of a contact who we can refer to for any questions. Please mark for the attention of the QA Department.

IMPORTANT

If this equipment is important to your process, you may want to buy a spare to cover possible failure or accidental damage in the future.

This is because during factory shutdown periods, you may have to wait several weeks for an equivalent replacement, or we may have no stock at the time you urgently need it.

You may also need to pay extra carriage charges if you want a fast, guaranteed courier service. Warranty repairs or replacements are usually returned with a standard courier service.

We do not offer compensation for losses caused by failure of this instrument.

If you do not agree with these conditions, please return this item in unused condition, in its original packaging and we will refund the purchase price, excluding any carriage paid.

We thought you'd prefer to know about possible delays and extra charges now, rather than during a panic. A spare unit could help to avoid these issues.

We always try to improve our products and services, so these may change over time. You should keep this manual safely, because future manuals, for new designs, may not describe this product accurately.

We believe these instructions are accurate, and that we have competently designed and manufactured the product, but please let us know if you find any errors.
General Description

MAGNA temperature displays consists of a MAGNA RS485 serial input large digit display and a Laureate LT series RTD or thermocouple transmitter with an RS485 output. Use of a digital RS485 interface ensures that the displayed reading is always the same as the transmitter reading. It allows the Laureate transmitter to be installed inside the MAGNA display housing or to be installed remotely with long RS485 cable runs. Such runs allow wide separation between the display and the temperature source, while keeping the sensor wires short.

The Laureate RTD transmitter, if selected, can be set up for four RTD types: Pt100 for DIN alpha of 0.00385, Pt100 for ANSI alpha of 0.003902, nickel Ni120, or Copper Cu10. The Laureate thermocouple transmitter, if selected, can be set up for seven thermocouple types: J, K, T, E, N, R, S. Both transmitters can be set for °C or °F, and 1° or 0.1° resolution. A resolution of 0.1° is normally reserved for RTDs. When you specify the sensor type, °C or °F, and 1° or 0.1° resolution, the system is shipped ready to run for your application.

Available digit heights are 57 mm (2-1/4"), 102 mm (4.0"), 150 mm (5.9"), and 200 mm (7.9"). For every 10 meters of viewing distance required, use 1” of digit height.

Optional alarm relay outputs, analog output, and a serial data output modules can be ordered and are programmable via the display’s front panel keypad. An optional 4-wire remote pushbutton unit allows the display to be programmed while it is mounted in an inaccessible location.

Other options are: 100-240 VAC or 11-30 VDC power; normal of daylight viewing display brightness; wall mount, suspension mount or panel mount; and a heater for operation down to -25°C.

MAGNA displays must be installed fully assembled, and must be installed according to local electrical installation rules.

When properly installed, and provided they have been ordered with cable glands exiting the lower surface of the case, they provide environmental protection to IP65 / NEMA4X from all sides.

Safety

Caution: There is a risk of electrical shock if this display is not properly installed

Caution: Risk of danger: Read the whole manual before you install this display

Obey all safety warnings in this manual, and install the display according to local wiring and installation regulations. Failure to follow these guidelines may cause damage to the display, connected equipment, or may be harmful to personnel.

Any moving mechanical device controlled by this equipment must have suitable access guards to prevent injury to personnel if the display should fail.
Connecting Your Display

MAGNA temperature displays are shipped with a built-in or external Laurate LT temperature transmitter. As specified in the order, the transmitter will be built-in or external, be set up for a specific RTD or thermocouple type, for display in °C or °F, and for 1° or 0.1° resolution. 0.1° resolution should only be used for RTDs. An analog output option, if ordered, will be set up for 4-20 mA, 0-10V or -10 to +10V output, and for upper and lower temperature limits as specified in the order.

To wire the display, insert circular cables through the provided M12 cable compression glands. These are rated for round cables with a diameter of 3.0 to 6.5 mm (1/8” to 1/4”). When the outer nut is tightened by hand, seals inside the gland are compressed against the cable, thereby making a hermetic seal.

For power, insert a 6.5 mm (1/4”) diameter round cable through one of the glands, and connect it to the unterminated power cord inside the display using twist-on wire connectors.

For a thermocouple temperature signal, run a round cable through an available gland, and connect the sensor wires to the Laureate transmitter as illustrated below:
Connecting Your Display (continued)

For an RTD temperature signal, run a round cable through an available gland, and connect the sensor wires to the Laureate transmitter as illustrated below.

In 2-wire hookup, the meter senses the combined voltage drop across the RTD and both lead wires. The voltage drop across the lead wires can be measured by shorting out the RTD during meter setup, and this voltage is then automatically subtracted from the combined total. However, changing resistance of the lead wires due to ambient temperature changes will not be compensated.

In 3-wire hookup, the meter senses the combined voltage drop across the RTD plus two excitation leads. It also senses the voltage drop across one excitation lead, and then subtracts twice this voltage from the combined total. This technique effectively subtracts all lead resistance and compensates for ambient temperature changes if the two excitation leads are identical.

In 4-wire hookup, different pairs of leads are used to apply the excitation current and sense the voltage drop across the RTD for ratiometric operation, so that the IR drop across the excitation leads is not a factor.

MAGNA Connections

There is a range of possible locations for the input board, output board and power supply boards. Their locations depend on the height of digits, number of digits, brightness of digits and any installed options. Because the permutation of possible locations is large, we will not describe the location of boards within the display, but simply identify the connectors and their functions on each board, below...

Warning: Disconnect all power before removing the rear of the display.

Rated 2A 250VAC Resistive

Enable is used in mode C1 to activate or de-activate the RS232 or RS485 serial output. Connect to Comm to continually transmit data.

**Remote programming button connector**
On one of the display boards, you will find a 7 way connector, to which you can wire remote programming buttons, to allow adjustment of the display’s settings when the display is inaccessible.

You can also enable or disable the display’s front panel buttons, either by a remote contact closure, or by an on-board push-on jumper switch, which is located near to the remote button connector. When the contact is closed, or the push-on switch fitted, the front buttons are enabled.

Installation Hints for Best Performance

This section offers several suggestions which will help you get the best performance from your system.

RS232 and RS485 use comparatively small signals which can easily be corrupted by the potentially high level of electrical noise which can be created by electrical machinery such as motors, welding systems, discharge lighting, AC power inverters and solenoids. These steps will ensure you get the best possible performance from your system.

RS232 has limited capability over long cable distances, due its low driving power (which causes the signal to reduce in level as cable length increases) and single ended signal (which is prone to interference by local electrical noise), as shown below.

</tbody>
</table>

1. Use good quality screened signal cable, with twisted pairs. Screened twisted pair CAT5 cable is ideal. The screen should be earthed at the display end only.

2. If you are using multi-pair twisted cable, each pair should be dedicated to a single display as shown opposite, for maximum noise immunity. This will ensure that any electrical noise induced in the cable is properly cancelled. Mixing destinations carelessly amongst the twisted pairs can easily corrupt data.

3. The cable should be routed away from noisy wiring and devices such as power feeds from inverters, discharge-lighting cables, welder cabling etc, and should preferably be routed in a dedicated low voltage signalling/instrumentation conduit or cable tray.

4. If you want to simulate data, a useful free terminal, with good flexibility is RealTerm, available from http://sourceforge.net/projects/realterm/
When using multi-core screened cable to connect several displays to several data sources, please be sure to use one twisted pair for each display and sensor.

Do NOT use a wire from one pair for signal positive and a wire from another pair for signal negative, as this will prevent the twisted cables from cancelling any induced electrical noise, and can couple noise from one source to another.
Connection of Laureate LT Transmitter

MAGNA large-digit temperature displays consist of an a MAGNA RS485 serial input display and a Laureate series RS485 output LT series transmitter. These two components are integrated as a system at the factory. For reference purposes, this page describes how they are interconnected via cabling and software. This description applies to all available Laureate LT series transmitters: process, load cell, temperature, DC, RMS, frequency, totalizer, stopwatch, timer, phase angle, duty cycle, power factor, and more -- not just temperature.

Program the MAGNA display from its front panel:

1. Set the lockout switches to OFF (up, away from the computer board).
2. Power up the display and load the meter’s default settings by pressing the two left push-buttons until dEFn appears on the display.
3. Press the UP button so you see dEFY and press the OK button.
4. Use the OK key to advance to each menu. Set the MAGNA display as follows:

   - **Ad.00**: Address 00, which is default if not addressing.
   - **S.C.00**: Default start character is hex 00.
   - **E.C.0d**: End character is 0d (carriage return)
   - **Brad 9.6**: Set baud rate to 9600, which is default for LT transmitter.
   - **BnL**: Set data format to 8 data bits, no parity, 1 stop bit.
   - **t.r.05**: Time to reply in mS following a request.
   - **t.c.00**: Time in mS between each character.
   - **t.o.03**: Timout in seconds (3S), after which display shows - - - -
   - **S.P.00**: Start position for editing.
   - **dL.06**: Data length for editing
   - **dddd.**: Decimal point position for alarms.
   - **dP.R**

Set up the LT transmitter:

2. Program the LT transmitter with Instrument Setup Software for Continuous mode, 9600 baud, N81, start character hex 00, end character 0d (carriage return).
3. Connect the LT transmitter to the MAGNA display as follows:

<table>
<thead>
<tr>
<th>LT</th>
<th>to</th>
<th>MAGNA</th>
</tr>
</thead>
<tbody>
<tr>
<td>4, 5</td>
<td>to</td>
<td>4</td>
</tr>
<tr>
<td>3</td>
<td>to</td>
<td>2</td>
</tr>
<tr>
<td>1, 2</td>
<td>to</td>
<td>3</td>
</tr>
</tbody>
</table>
Data connection to LT transmitter

Data connection to MAGNA RS485 input port (upper left)

Connector details, MAGNA (left) and LT transmitter (right)
Language Selection for User Interface

1. Lockout Switch must be OFF
   - Press together, briefly
   - Circuit board ON

2. For 4 digits, display shows
   - LEnG (Default)
   - for User Interface English
   - LFrA
   - for User Interface French

3. Press to toggle
   - Press to accept
   - Done!
Display Brightness

You can adjust the display brightness at any time, provided the display is locked.

1. Lockout Switch must be ON
   Circuit board ON
   Press 3 seconds

2. For 4 digits, display shows briL
   Each press of the UP button selects a new brightness level. There are 7 brightness levels to choose from.
   (Default = Full brightness)
   Press for 3 seconds

3. Press to accept
   Done!

Did you know, we make this display in two brightness versions? Standard brightness for use inside, and Daylight Viewing for use outside in direct sunlight. The Daylight Viewing version has suffix -DLV in its part number.
You can choose from three operating modes.

1. **Lockout Switch must be OFF**
   - Circuit board: ON
   - Press 3 seconds

2. **For 4 digits, display shows ASC, q.an or q.tot**
   - ASC 11 (4 digits) or ASC 11 (6 digits) is used for any application where non-numeric characters need to be displayed. You can not have alarms, analog output, tare, peak, valley or any mathematical functions with this mode.
   - q.an (4 digits) or q.an: is used for any numeric display work which needs alarms, analogue output, tare, peak, valley or mathematical functions.
   - q.tot (4 digits) or is used in applications where you want to sum values, for example to add together ingredient weights to get a combined weight.

3. **Press to accept**
   - Done!
MAGNA Serial Data settings

Choose the serial data settings to suit the transmitting device.

1. Press to accept

2. Display shows each of the parameters and you can edit or move on to the next one with the OK button.

   You can edit the settings with the DIGIT, UP and DOWN buttons. OK to accept.

   The default parameters are:-

<table>
<thead>
<tr>
<th>Parameter</th>

</tbody>
</table>

3. Press to accept

Done!
MAGNA Serial Data Setting Examples

Sending data to an addressed display

Let us assume the display has address 45 and you want to send the value 123.4 to it at 19200 baud. Your data will be sent as <STX>45123.4<CR>

Set
Ad.45, S.C.02, E.C.0d, bAud 19200, 8n 1,
t.r.05, t.c.00, to. 03, S.P.00, d.L.06,
ddd.d

Extracting data from a complex string (data editing)

Let us assume the data is sent as a complex string at 1200 baud such as ...
<Start Char><Address Characters><Data: ligo6ho987hmw1234.56kg abcd><End Char.>
and you want to display only the numeric weight value...

<table>
<thead>
<tr>
<th>Start Character</th>
<th>Address Characters</th>
<th>Data: ligo6ho987hmw1234.56kg abcd</th>
<th>end character</th>
</tr>
</thead>
<tbody>
<tr>
<td>STX</td>
<td>78</td>
<td>Value to display</td>
<td>ETX</td>
</tr>
<tr>
<td>s.Pos.xx 0 to 99</td>
<td>d.Len.xx</td>
<td></td>
<td>s.Pos.xx -1 to -19</td>
</tr>
</tbody>
</table>

You would set....
Ad.78, S.C.02, E.C.03, bAud 1200, 8n 1,
t.r.05, t.c.00, to. 03, S.P.15, d.L.06,
dd.dd.

Bias +5V on Sig B
Bias 0V on Sig A
120 Ohm termination resistor

Solder Switch closed

RS485 Version (IC4 missing)  RS232 Version (IC3 missing)
MAGNA Logic Input Functions

The three contact closure inputs on the rear of the meter have default functions which are:

- Contact closure 1 = Tare
- Contact closure 2 = Peak/Valley display
- Contact closure 3 = Reset

You can re-assign these to include: HOLD, Nett/Gross value display, Memory page address 1, 2 or 4 (only if Multi-memory MEM option is installed)

1. **Lockout Switch must be OFF**

   - **Circuit board ON**
   - Press 3 seconds

2. Press repeatedly until you see **CC. 1**, followed by the existing function for Contact Closure 1.

   - After you have set **CC. 1**, you will get the prompt **CC. 2** to allow you to set Contact Closure 2 function and when you have set **CC. 2** you will get the prompt **CC. 3** to allow you to set Contact Closure 3 function.

3. Use UP or DOWN buttons to select from these available functions...

   - **tR-E** = Tare display to 0
   - **PV** = Peak/Valley toggle
   - **rSt** = Reset
   - **HoLD** = Freeze display
   - **nEt.Gro** = Nett / Gross display
   - **PA.1** = Page Address 1*
   - **PA.2** = Page Address 2*
   - **PA.4** = Page Address 4*

4. Press to accept

* Only available if the Multi-memory MEM option is installed.
MAGNA Logic Inputs & Front Panel Buttons

The previous page explained how to select the functions of the 3 logic inputs. You can connect remote contact closures or open NPN collectors to activate these logic inputs.

The logic input provides a 5V DC signal. When you connect this to common, a current of 1mA will flow. Because this is a small signal, we recommend you use switches with gold plated contacts, or self cleaning contacts, for best long term reliability.

The logic inputs are not galvanically isolated from the input signal.

The logic inputs are only activated when the lockout switch is ON.

Tare = Tares display to 0. Often used in weighing systems to zero a display prior to making a measurement. Net weight is shown once tared. When a display has been tared the small LED above the Set1 button will be illuminated.

PV = Peak/Valley toggle. Allows you to view the maximum and minimum values which have been displayed since last reset. 0% LED illuminates when showing valley, 100% LED illuminates when showing peak.

Rst = Reset. This clears any tare, peak, valley, alarm latch

Hold = Freezes the displayed value for as long as the Hold input is closed

Net.Gro = Allows you to toggle between Nett and Gross values on the display

PR.1 .. 4 = Page Addresses, if MEM option is installed.
MAGNA Factory Defaults

You can return the display to its factory default conditions whenever you wish. If you do so, you will permanently lose all your settings and will need to start from the beginning again.

The calibration Audit Counter will NOT be reset, there is no way provided to reset this value, as it is intended as a secure record to indicate whether changes have been made to the display since it was last calibrated.

1. Lockout Switch must be OFF
   Circuit board ON

2. Display shows: -
   def.n (Defaults no)

   Press the DOWN button to change the display to def.y (Defaults Yes) if you want to return to default conditions.

3. Press together for 3 seconds

   Done!

Calibration Audit Number

Your display includes a non-resettable counter which increments each time you make a change to the display’s calibration. This is useful if you want to check whether a display has been altered since it was last calibrated.

The Calibration audit number starts at CL 01 up to CL FF allowing up to 255 alterations to be recorded. Whenever you want to check the calibration audit number, press and hold the 2 outer buttons (Set1 + Alarms) for more than 3 seconds.

1. Press together for 3 seconds

   Done!
After you have calibrated your meter, you can use the SCALE feature to make fine adjustments to calibration, without affecting the calibration itself. You must have mode = Quan.

**Examples**

1. **Changing weight units of measure from kg to pounds**
   You could also use the SCALE to convert your readout from kg to pounds, without affecting the calibration. Simply set SCALE = 2.205 and your meter which was calibrated in kg will now read in pounds.

2. **Correcting for gravitational variance**
   Your weighing system was calibrated where gravitational acceleration = 9.812m/s² (London) You then move the system to Bankok where gravitational acceleration is reduced to 9.782m/s²

   You can correct for this difference by setting Scale = 9.812 / 9.782 = 1.003, so that a given mass in Bangkok will show the same weight as it did in London. Set Offset = 0.0000

---

**Lockout Switch must be OFF**

Circuit board ON

Press 3 seconds

Press repeatedly until you see SCALE, followed by the existing scale factor. (Default = 1.000)

Use DIGIT button to select each digit in turn, UP or DOWN buttons to increase or decrease each digit’s value. Press OK when done.

Press to accept

Done!

You may want to adjust an offset value also, see separate OFFSET page for this feature.
Offset Adjustment

After you have calibrated your meter, you can use the $\text{OF St}$ feature to make fine additions or subtractions to the reading, without affecting the calibration itself.
You must have mode = $\text{Quan}$

For example if your weighing structure is altered after calibration and you want to subtract the effect of 37kg of extra metalwork which was welded to the hopper, you can easily do this by entering a value of -37 in the offset value.

1. **Press 3 seconds**
   - Lockout Switch must be OFF
   - Circuit board ON

2. **Press repeatedly until you see $\text{OF St}$, followed by the existing offset value.** (Default is 0.000)

3. **Use DIGIT button to select each digit in turn, UP or DOWN buttons to increase or decrease each digit’s value.** If you want to set a negative value, use DIGIT to select the left hand digit, and press the down button to go below 0 to activate the - sign. Press OK when done.

4. **Press to accept**
   - Done!

You may want to adjust a SCALE FACTOR value also, without affecting calibration. See the separate SCALE page for this feature.
Menu Timeout Adjustment

The display has a default timeout of 60 seconds, to allow you sufficient time to refer to the manual between key operations.

You can make this period shorter, if you wish, once you become more familiar with the setup method.

1. Lockout Switch must be OFF

2. Press repeatedly until you see \texttt{dy. XX} where \texttt{XX} is the delay in seconds. Choices are ...
   
   \begin{itemize}
   
   \item \texttt{dL. 10}
   \item \texttt{dL. 20}
   \item \texttt{dL. 30}
   \item \texttt{dL. 60} (default)
   \end{itemize}

3. Press DOWN or UP button briefly and repeatedly to choose from \texttt{dy. 10} or \texttt{dy. 20} or \texttt{dy. 30} or \texttt{dy. 60}

4. Press to accept

\textbf{Done!}
Reverse Display Function (Mirror Image)

If you need to be able to see a reflection of the display in a mirror or other reflective surface, for example in a simple heads-up system, or for drivers reversing into a bay, using mirrors only, you can set the display to show as a mirror image.

1. **Lockout Switch must be OFF**
   - Press together, briefly
   - Circuit board ON

2. **Press OK button briefly and repeatedly until you see**
   - \( rE\!U.\ 0 \) (Default) or \( rE\!U.\ 1 \)

3. **Press DOWN or UP button briefly and repeatedly to choose from**
   - \( rE\!U.\ 0 \) (normal display) or \( rE\!U.\ 1 \) (mirror image display)

4. **Press to accept**

**Example of normal display format**
- 876543

**Example of Mirror Reverse display format**
- EP224E8

Example of normal display format displaying the number 876543
Example of Mirror Reverse display format displaying the number 876543
Bootup Routine and Tare Save Choices

When you switch on your meter, it can be set to power up with 3 possible summary message combinations. The choices are:-

**bt 0** = Segment test, followed by a full summary of software revision, calibration audit number, model number, installed options.

**bt 1** = Segment test followed by model number *(Default)*

**bt 2** = No summary, meter displays the measurement value immediately power is applied.

**bt 3** = All segments illuminate permanently, until a button is pressed.

1. **Lockout Switch must be OFF**
   - Press together, briefly

2. **Press OK button briefly and repeatedly until you see** **bt 0** or **bt 1** or **bt 2** or **bt 3** **displayed**

3. **Press briefly to toggle**

4. **Press to accept**

5. **You can now decide if the tare value is saved on power-down. Select from** **tar.S** to save or **tar.N** not to save.

6. **Press briefly to toggle**

![Done!](image)

You can trigger the full summary message whenever you want, without having to power the meter off, by pressing and holding the 2 outer buttons (Set1 + Alarms) for more than 3 seconds.
**Multi-Program Memory Option MEM**

The three contact closure inputs on the rear of the meter may be used to call up between 1 to 7 additional meter setup memories (pages), if the MEM option has been installed. This allows you to save up to 8 complete sets of independent calibrations, alarm settings, analogue output settings and serial comms settings.

First decide how many memory pages you want, as this will determine how many logic inputs you will need to use for the addressing. Logic inputs not required for Page Addressing can be used for other functions such as Tare, Reset, Display Hold, Peak/Valley display.

If you have used all 3 logic inputs for Page Addressing, you can still use the meter’s front panel buttons to perform Tare, Reset and peak/Valley view.

<table>
<thead>
<tr>
<th>Total number of pages</th>
<th>Logic Inputs required for addressing</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>none, standard single page meter</td>
</tr>
<tr>
<td>2</td>
<td>1 Set CC.1 = PA.1</td>
</tr>
<tr>
<td>3 or 4</td>
<td>2 Set CC.1 = PA.1, Set CC.2 = PA.2</td>
</tr>
<tr>
<td>5 to 8</td>
<td>3 Set CC.1 = PA.1, Set CC.2 = PA.2, Set CC.3 = PA.4</td>
</tr>
</tbody>
</table>

1. Set lockout switches OFF, and set page address to 0 or unplug the logic connector.
2. Set the copy instruction to COP.1 in page address 0 (found after you set CC3).
3. Press all 4 buttons together, display shows def. n
4. Press the Up arrow to change display to def. Y and press OK.
5. If you want all channels to share a common setting, eg calibration, do that setting now.
6. When you want to do separate settings for each channel, set COP.0

**Programming and recalling individual pages**

Plug the logic input connector back in, if you removed it earlier. Select a page address using the switch combinations shown below, wired to the Logic Input connector...

<table>
<thead>
<tr>
<th>Page address 0</th>
<th>All logic inputs open</th>
</tr>
</thead>
<tbody>
<tr>
<td>Page address 1</td>
<td>CC.1 closed to Common</td>
</tr>
<tr>
<td>Page address 2</td>
<td>CC.2 closed to Common</td>
</tr>
<tr>
<td>Page address 3</td>
<td>CC.1 and CC.2 closed to Common</td>
</tr>
<tr>
<td>Page address 4</td>
<td>CC.4 closed to Common</td>
</tr>
<tr>
<td>Page address 5</td>
<td>CC.1 and CC.3 closed to Common</td>
</tr>
<tr>
<td>Page address 6</td>
<td>CC.2 and CC.3 closed to Common</td>
</tr>
<tr>
<td>Page address 7</td>
<td>All logic inputs closed to Common</td>
</tr>
</tbody>
</table>

Perform the settings you require, according to the pages in this manual. Do this for all page addresses required. Then put the lockout switch in its ON position. Now, if you select a page address, the meter will briefly confirm the chosen page address on screen, and will then function according to the settings you programmed for that address.

Suitable BCD coded switches are available from many electrical supply stores. For example consider Kraus & Naimer part A540-600 E24 or Apem part number IRBC10N1248 or London Electronics part number SW2P-8W-BCD, which also provides separate 2 pole 8 way signal selection function.
1. Display shows minus signs.

This tells us that there is no response to input data, either because....

a) There is no data, and the display has timed out
b) There is an error in the data wiring.
c) One or more of the menu settings may be wrong.

You can test for a) and b) with a simple data monitor which you can make with 2 diodes and a resistor, as shown below.

The Green LED should be on for most of the time, and you should see the red LED flicker as data is sent.

If the red LED is lit most of the time, with the green flickering, your wiring may be transposed.

If neither LED is lit, check your data source to make sure it is configured to transmit continuously, and check your connections to make sure the cabling and connector terminals used are correct.

If the Green LED is on, but no flickering of the red is seen, check that the data source has been set to transmit permanently. If the data source is another London Electronics Display, make sure it has been set to mode C1 and that the enable terminal on the serial output connector is connected to data common.

**Simple Data monitor.**
2 x LEDs connected back to back and a resistor.

<table>
<thead>
<tr>
<th>Terminal numbers on input connector of display</th>
</tr>
</thead>
<tbody>
<tr>
<td>RS232</td>
</tr>
<tr>
<td>3</td>
</tr>
<tr>
<td>Green LED on most of the time. Red LED flashes with data.</td>
</tr>
<tr>
<td>2</td>
</tr>
</tbody>
</table>

2. You can use your PC to generate and monitor serial data, with a free program called RealTerm which you can download from :-
http://sourceforge.net/projects/realterm/

This can be very useful in diagnosing communication problems.
How to Install Option Boards

If you want to open your display to install or modify option boards, follow these steps...

1) Switch off power to the display and unplug all connectors.

2) Undo all the thumb screws on the rear case, store them safely and remove the back panel.

3) Locate the main option board, which will be similar in appearance to the diagram below. If a main option board is absent, which will be the case if the display was ordered without any output options, then a main option board will need to be fitted.

The board assemblies will look like this...

The analogue output and RS232 or RS422 plug-in option boards are fixed to the main option board with white plastic pillars. You must apply a firm force when fitting or removing these options.

Always be careful to connect the pins to sockets accurately. When reassembling, make sure option boards are firmly fixed to the upper option board.
**Waste Electrical Electronic Equipment (WEEE)**

In Europe, this equipment must be disposed of in accordance with European Parliamentary Directive 2002/96/EC

This directive encourages recycling and the reduction of waste materials in the environment.

This means it **must** be sent to an approved recycling plant if you want to dispose of it.

It must **not** be thrown away with general rubbish.

---

**If you are unable to dispose of this item locally, you may send it to us for recycling.**

**Conditions:**

1. We will only accept items of our manufacture.

2. You must pay for the transport of the goods to us.

3. We will only accept items if they include a signed declaration by an authorised person in your organisation, stating that:
   
   i. The item is safe to handle and has no contaminants which may be harmful to health.

   ii. You wish us to dispose of or destroy the item(s)
Equipment Specifications

Display
- 57 mm (2-1/4"), 102 mm (4.0"), 150 mm (5.9"), or 200 mm (7.9") LED digits, as ordered.
- Indoor or outdoor viewing brightness, as ordered.
- Display range -1999 to 9999 with decimal point.

Display update rate
- 10 readings per second.

Case Material
- Heavy duty welded uPVC.

Connectors
- External M12 compression glands for hermetic seal with round cables with 3.0 to 6.5 mm diameter.
- Internal detachable screw terminal connectors.

Environmental
- Storage Temperature range -20 to +70°C, non condensing.
- Operating temperature range 0 to 50°C. Internal heater option available for use in conditions down to -25°C.
- Allow 30 minutes for product to reach thermal equilibrium.

Power
- 100-240 VAC, 45 to 60Hz, 11-30 VDC optional, 48V AC optional.

Burden
- 40VA maximum.

Sealing
- IP65 all round, provided the display is mounted vertically and that all cable glands and rear case-closure screws are properly secured.

Internal Data Signals
- RS485 preset to 9600 baud.
- Baud rate selectable from 300 to 115200
- Data format selectable 701,7e1,7n2,80,8E,8n,8n2
- Address 00 to FF
- Inter message delay time 00 to 99 mS
- Inter character delay time 00 to 99 mS

Plug-In Output Options

Analog output
- See MAGNA analog output manual for details.

Alarm Relay output
- See MAGNA alarm output manual for details.

ASCII Data output
- See MAGNA serial output manual for details.

Calendar/Clock option
- See MAGNA serial output manual for details.
### RTD input (if ordered)

- **Calibration, Pt 100 DIN**: Per IEC 751 (ITS-90)
- **Calibration, Pt 100 ANSI**: NIST Monograph 126
- **Calibration, Ni 120**: 43760
- **Max error at 25°C, Pt100**: ±0.04°C (±0.07°F) ±0.01% of reading
- **Span tempco**: ±0.003% of reading/°C
- **Zero tempco**: ±0.03 deg/deg
- **Provision for user calibration**: Multiplier of RTD resistance plus offset in degrees
- **Connection**: 2, 3 or 4-wire
- **Overvoltage protection**: 125 Vac
- **Open sensor indication**: 0 mA or > 20mA output, user selectable
- **Sensor lead resistance**: 2-wire, 10 mdeg/ohm/deg up to 10 ohms
- **Tempco per conductor**: 3 & 4-wire, 10 mdeg/O/deg up to 100 ohms

**Special Data Commands**

These messages are not handled by the normal data parsing. If the escape character ‘~’ is the first available character the whole message is treated as a command message.

Message format is: `<S.Chr><Addr>~[Command]<E.Chr>`.

- **Display Brightness Control**   ‘~Bx’ where ‘x’ is 1(dim) to 8(bright)
  The brightness setting is not saved to non-volatile memory

- **Clear display**   ‘~C’   Clears display and indicators (meter looks like it’s turned off)
  The display will return to its illuminated state on the next receipt of normal data.

- **Set/Clear Alarm Indicator**   ‘~Aas’ where ‘a’ is the Indicator ID (0 to 3)
  where ‘s’ is the state (0 or 1)
  When this command is received normal alarm indication is suspended until the meter is rebooted
Declaration of CE Conformity

Declaration Reference : INs
Title : DOC-INTUITIVE2

This is to confirm that the Product covered by this declaration has been designed and manufactured to meet the limits of the following EMC Standard :

EN61326-1:1997

and has been designed to meet the applicable sections of the following safety standards

EN61010-1:2001

Conditions

The meters are permitted a worst case error of 1% of A/D range during electro-magnetic disturbance, and must recover automatically when disturbance ceases without the need for human intervention, such as resetting, power-down etc.

The meters covered by this certificate must be installed in adherence to the following conditions :-

Signal cabling shall be routed separately to power carrying cabling (includes relay output wiring)

All signal cabling shall be screened. The screen shall only be terminated to the power earth terminal at the meter end of the cable.

Declared as true and correct, for and on behalf of Laurel Electronics Ltd.
